

**America's Finest Show Falling Events**

<http://www.effectspecialist.com/snow.htm>

**Snow Falling Packages from**

**500.00- 1000.00 - 2000.00 a day 10 days plus in a row**

**Here is the a list of suggested packages For Malls, Retail Shopping Centers, Cities and Entertainment Venues**

**Please realize that each one needs can be much different so we can create a price and package that work just right for you at your venue.**

**We need you to tell us how much coverage and how many days of snow you will need for us to give you the best price.**

**We will design your snow falling event with the best snow machines money can buy. These snow machines have the highest output of snow in the industry. We are manufacturer Snowmasters # 1 installer.**

**Our technicians will install for you, and can teach your maintenance personal on how our system operates. It will take minimal effort. Your staff will maintain your snow event with a minimum daily maintenance task.**

**The show will automatically start and end at the correct event times. We do not need to have a technician on site for your event that saves you money. Our machines are weather resistant so only a visual check once a show is needed**

**The reaction of the snow in any given location will vary. We have a formula that we use, on how many machine will cover how much space, but our packages also include extra machinery and gear to make certain all angles are covered and your event is perfect. Buying into our package's which utilize all different types of machines grouped together make sense.**

- Timer Controller
- Effect fans air movers

- Tripods
- Sandbags
- Lighting

### **Snow Evaporates On Cue**

Our snow machines have DMX Software that allows the control of the 100 snow flake size options, which is the key to make the "flakes" disintegrate more rapidly. The "flake size" control varies the speed of the pump, and therefore the amount of fluid sprayed. More evaporating snow fluid results in more and larger clusters of bubbles. If the machines are placed 10 foot off the ground we will need smaller flakes to make the snow evaporate before the flakes hits the ground. If the machines are placed 30 feet off the ground a larger flake size can be used.

The flakes size and travel time makes the snow evaporates on cue.

**0 - 3/16 inch flake - 10ft**

**1/8 - 1/4 inch flake - 20ft**

**1/4 - 1/2 inch flake - 30ft**

Only our professional grade snow machines have these abilities.

**Evaporative time: Small – medium flakes: 30-90 secs**

**Large flakes: 90 to 120 secs**
