The Bubble Blaster 3000 comes in white

The machine is buttoned up nicely

The machine fits snugly into the Bubble pit

The machine feeds into the pit from behind

optional handle placement on both sides of

FAQ

Frequently Asked Questions(FAQ's) About Foam Parties

It's easy, great fun and everyone loves foam bubbles and foam parties. Create that unique event that everyone will be talking about and remember for years. Great event for picture taking. Learn how today-See our FAQ's below:

FAQ 1: What type of events are good for a foam party?

Child birthday parties, Day Camp Events, Day Care Events, block parties, church festival events, fundraising events, corporate events, university functions, and professional concert events

FAQ 2: What do I need to produce a foam party?

We recommend renting a bubble blaster 3000 with water pump, trash can, foam pit and 1 gallon of foam solution. You may go without renting the foam pit if you have a confined area or a small child pool that you can use to lay in the foam.

A background image showing several children playing in a large pit filled with white foam. The children are smiling and some have foam on their faces and hair. The scene is bright and festive.

FAQ 3: How difficult is it to operate a foam machine for a party?

If you have setup an inflatable bounce or slip and slide you should be able to operate a foam machine. Preparations include the following steps below and should take approximately 15 minutes:

- **Site Selection (20X20) area for 15X15 foam pit**
- **Access to water hose, electricity(extension cord, surge protector recommended), and 32 gal trash can**
 - **Plugs for foam machine, foam machine water pump, and foam pit blower.**
 - **Water hose and 32 gallon trash can**
 - **Outdoors: On grass preferred**
- **Fill 32 gal trash can with water and add 1 liter of foam solution. Place near foam machine setup.**
 - **Attach sump pump to foam machine via hose connection.**
- **Insert Bubble Blaster foam party machine into foam pit and inflate pit. Surge protector should be placed at least 20 ft from setup and placed off the ground**
- **Drop water pump into the 32 gallon trash can and turn on pump and foam machine**
- **Once the required foam height(not to exceed chest high for your guests) is reached you may turn off the pump(unplug or pull pump from water) and the foam machine(press on/off button).**
 - **As foam goes away turn on the machine and the pump intermittently as needed.**
- **Adult attendants required at all times to monitor water level(check for refill), children play area, foam height and foam pit operation**

FAQ 4: Will I need any supplies for my foam party not supplied by the rental company?

Local rental companies typically provide everything required. If you rent a machine delivered via mail you will need to provide the 32 gallon trash can, power strip, extension cord,and chain/tie-downs for hanging machine. You may choose to place the machine on a table or work horse instead of hanging the machine.

FAQ 5: Where should we hold the foam party?

Outdoors on a grass surface is best. The foam will get a little slippery; if you are going to hold it on a hard surface we would recommend that children wear athletic shoes to reduce the likelihood of slips and falls. Foam products have been used for decades at events; the safety record of foam exceeds that of inflatable bounces.

FAQ 6: How much do foam parties cost?

Typically \$125-\$200 dollars an hour with a 2-4hr minimum. Rental rates depend on machine type, # of machines, amount of foam solution required, professional attendant required, and shipping costs.

A photograph of several children playing in a large pit of white foam. The children are wearing colorful swimsuits and are smiling and playing with the foam. The foam is piled high around them, covering their bodies and the ground.

FAQ 7: Who should I call to get a quote for a foam party?

We can provide to you a quote no matter where you are located

FAQ 8: How messy is a foam party?

Fill a 32 gallon trash can with water and add 1 liter of foam solution (1-3% solution to amount of water). Our foam machines use about 3.2 gallons of water to fill a 15 X 15 X4(10% of the 32 gallons. Trash can will fill foam pit 7-10 times). Depending on whether your location is dry or humid, a large amount of the water is lost through evaporation as the foam goes away. After the party the foam solution will leave a chalky residue that will dry into a powder and blow away or can be rinsed away with a water hose.

FAQ 9: Will guests get wet? Will the foam harm kids, clothes, pets or landscaping?

Yes the kids will get wet, but not as wet as a slip and slide, wet slide or a pool. The foam solution will not harm kids. The foam solution is biodegradable, non-toxic and hypo-allergenic it will not harm skin, clothes, pets or lawns.

FAQ 10: Can foam machines be used with other inflatable's (bounces, slides, slip and slides)?

Yes, foam machines make a great addition to the traditional combination bounce house. Use with a dry or wet slide and create a great added attraction. Care should be taken with entering and exiting bounces once they become wet. An adult attendant should be present at all times to monitor playing

FAQ 11: Can I use indoors and will it harm floors?

Many foam parties at night clubs and universities are produced indoors. We recommend that you get the advise of a professional event specialist and people familiar with commercial flooring and interiors prior to producing an indoor event.
